Immunosuppression can be protective; the advice comes from a document a recently released from AASLD to help hepatologists and liver transplantation ... The American College of Surgeons has issued new guidelines for cancer surgery at a time of COVID-19. Dr. Alan P. Lyss examines how the COVID-19 pandemic has and will affect cancer treatment and research. Screening patients, personal protection, procedure postponement, and special precautions with infected patients are discussed. Find useful resources and guidelines for all our health plans. For all healthcare plan providers, MDEHPPriority PartnersUSFHPNote on Medical Record Standards Documentation: Johns Hopkins HealthCare has established standards for primary care journal documentation. Journals must be maintained in a manner that is current, detailed and organized to facilitate communication, coordination and continuity of care. The standards address confidentiality, the availability of the medical record, and the required content in the journal. To ensure confidential care for members, JHHC standards state that medical records are stored securely. Records must be easy to retrieve, but only authorized personnel should have access to them. In addition, employees are expected to be trained in member confidentiality. Compliance with these new standards will be monitored as part of our quality improvement program. Drug and alcohol abuse or addiction are common problems, but are often under recognized in primary care. Using a single screening tool, such as the four-question cage substance abuse assessment, is a simple but effective way for the primary care provider to determine whether substance abuse exists and needs to be addressed. Text Resize A A A Print Share Postpartum Care should begin before birth and include a multifaceted network of resources. How family doctors can support the national strategic plan for sexually transmitted infections. The Centers for Disease Control and Prevention (CDC) provides information on the prevention of sexually transmitted infections, based on five major strategies. Risk assessment and education to reduce the burden of STD cation for vaccine-causing STDs Screening patients who do not show symptoms to prevent transmission of the disease to other Effective diagnosis, care and treatment, with appropriate follow-up of infected patients Evaluation, care and treatment of a sexual partner who may have a STI For further information on screening and treatment guidelines recommended by the CDC , please visit these resources: STD Treatment (Tx) Guide App Download CDC STD Treatment (Tx) Guide app, an easy-to-use reference that combines information from STD Treatment Guidelines as well as MMWR updates, and has a streamlined interface so providers can access processing and diagnostic information. The free app is available for Apple devices and Android devices. People write will at different points in life and for different reasons. Whether you're a new parent who wants to make sure your child is taken care of in case you die unexpectedly, or are approaching retirement age, consider writing your first will. There are basic criteria that must be met for each will, including naming executors and recipients and including clauses to make the will legally binding. While it is okay to be part of the draft process for your will, it is important that you work closely with a lawyer to ensure that the final document is legally binding. Give your will a title as Last Will and Will. Include your full name, including any maiden name, as well as your address; that you are at least 18 years old. If you have written an earlier version of your will, you must state that this is your final will and should override the previous will. Also say that you write your own will and have not been influenced by others. The executor is responsible for distributing your assets to the relevant parties and paying down debts, funeral expenses or taxes after your death. Ideally, the executor should be someone you trust who is familiar with your belongings. Ask close friends, your spouse, or other family members if they are comfortable performing these duties. Name an alternative executor in case your first executor cannot perform his duties. Unless you select an executor and name for this in the text of your will, the court court appoint and potentially charge your property executor fees. Include the full name of each recipient in your will to avoid confusion about their identity. Also name alternative recipients. Include a section titled Wills and give each recipient names and the specific items or dollar amounts they will inherit. Describe all items in detail so that there is no confusion about who gets which assets. If you have children who will require guardians, you should name a guardian in your will to prevent the court from appointing one for you. Again, discuss this decision with the person you wish to take on this duty. Make sure that the guardian you appoint is willing and able to take on the duties of guardianship. Choose a guardian who is stable and has the time and ability to devote to the care of your children. Describe how you want the remains to be handled after your death. Include any other details about the funeral that you would like to see performed. Do not forget to sign either side of your will and to include the signatures of at least two witnesses at the end of the document. Add a sentence explaining that they were present at the time you signed the will. also include a clause stating that you were not adversely affected by other parties in creating the will. Include full names and addresses of witnesses in addition to their signatures. Signatures.
